
seq 22 reishi_id901_ch1_461s: oscillatory FHN fit
MODEL PRC of the fitted FHN - not a measured PRC (no perturbation experiments)
limit cycle; ticks along the isochrons, coloured by phase
v (voltage, model units)
w (gating variable, model units)
phase
2π
3π/2
π
π/2
0
the same model's voltage PRC depends on what is held fixed
v phase response (rad per model voltage unit)
phase (rad)
w held fixed (the FHN's own coordinates)
v_d held fixed, delay 0.1 model units
v_d held fixed, delay 1.72 (quarter period)
h = w + 0.95 v held fixed (linear change)
constant-delay curves leave the panel (range -13.9 to 5.0)
