seq 3 oyster_id28_ch5_1394131s: oscillatory FHN fit (AIC prefers the EXCITABLE regime, which has no PRC)
MODEL PRC of the fitted FHN - not a measured PRC (no perturbation experiments)
1 model voltage unit = 3.9 mV (gain -3.9); 1 model time unit = 239 s
simulated noisy model observations (phase change)
median phase change
small perturbation, w held fixed (ground truth of the model)
adjoint (independent check)
constant delay (v_d held fixed)
corrected (Jacobian of (v, w) -> (v, v_d); assumes w fixed)
infinitesimal phase response
(rad per model voltage unit)
constant-delay curves leave the panel (range -3.02 to 12.3)
residual against the ground truth
phase (rad)
