Time (arbitrary units)
Image encodings
Convolution responses
Statistical summaries
GASF
GADF
Recurrence
Fusion (RGB)
Encode and resize
to 224 × 224 pixels
One fixed filter
Fraction above a bias → feature
Many filter, dilation and bias
combinations → ~5,000 features
A feature vector
catch22 and entropy features
24 retained initially; 26 in revision
CNN
EfficientNet-B0
learns image features
MiniRocket
Ridge classifier learns
from response features
Random forest
Learned trees combine
feature-based decisions
Each route predicts interesting / not interesting from labelled examples
Schematic waveform and feature bars; image encodings calculated from the waveform shown
